ABSTRACT:

PURPOSE: To obtain a compact device capable of executing recording operation stably by arranging a recording head on the intermediate position of a pair of rotary traveling parts and arranging a ribbon original winding reel and a ribbon winding reel on the upper positions of respective rotary traveling parts.

CONSTITUTION: In a recording part A2, a reference surface is formed by the lowermost surfaces of a traveling reference roller 7 and a traveling auxiliary roller 9, a thermal head 13 is observed from a recording window 8 arranged between the rollers 7, 9 and recording on recording part arranged on the surface B can be attained at every fixed movement of the whole device

A. A wide
ink ribbon 32 is engaged with the tip of the head 13 so as to be
wound around
from the original winding reel 33 to the winding reel 34. The reel
33 is
arranged almost on the vertical line of the roller 9 and the reel 34
is
arranged almost on the vertical line of the roller 7. The ribbon 32
is
supported by ribbon holding rollers 35~39 with proper tensile
force.
